

Amendments to the Claims

Claims 1-14 (Cancelled).

Claims 15-16 (Withdrawn).

Claims 17-20 (Cancelled).

Claim 21 (Withdrawn)

22. (New) A method of treating retroviral infection, comprising administering, to a host that is infected with a retrovirus, an antiretroviral therapy comprising ddI until viral replication is suppressed, and then administering a gene delivery complex comprising DNA encoding an immunogenic retroviral protein operably linked with a promoter and mannosylated polyethylenimine.

23. (New) The method of Claim 22, wherein the antiretroviral therapy further comprises a protease inhibitor is selected from the group consisting of indinavir, saquinavir, ritonavir, nelfinavir, atazanavir, and mixtures thereof.

24. (New) The method of Claim 22, wherein the antiretroviral therapy further comprises a reverse transcriptase inhibitor selected from the group consisting of d4T, 3TC, AZT, FTC, delavirdine, abacavir, adefovir, nevirapine, efavirenz, tenofovir DF, adefovir dipivoxil, and mixtures thereof.

25. (New) A method of treating retroviral infection, comprising administering, to a host that is infected with a retrovirus, an antiretroviral therapy comprising indinavir until viral replication is suppressed, and then administering a gene delivery complex comprising
